

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application.

**Listing of Claims:**

1. (Previously presented) A device for removing a composition from the skin, the device comprising: a non-shaving head which in use is moved over the skin to effect removal of the composition; a handle; and a joint between the head and the handle, permitting an articulation of the head about the handle.
2. (Previously presented) The device as claimed in claim 1, wherein there is a resistance force acting against articulation of the head, which resistance force increases as the articulation increases.
3. (Previously presented) The device as claimed in claim 1, wherein the head comprises an articulation about the handle through an angle in the range of 10 to 40°.
4. (Previously presented) The device as claimed in claim 3, wherein when the force, causing articulation of the head, is reduced or removed the head is able to recover a previous or original position.
5. (Previously presented) The device as claimed in claim 3, the device being unitary.
6. (Previously presented) The device as claimed in claim 5, the device being a one-part device comprising a plastic.
7. (Previously presented) The device as claimed in claim 3, wherein the handle is substantially rigid, the head is substantially rigid, and the joint is the only source of the articulation.

8. (Previously presented) The device as claimed in claim 3 wherein the joint is formed by a web of plastic material at the base of an upwardly open notch between the handle and the head.
9. (Previously presented) A method of removing a composition from the skin comprising the steps of applying the device as claimed in claim 1 to skin and removing the composition.
10. (Previously presented) The method of effecting depilation, comprising the steps of:
- applying a depilatory composition to skin for a pre-determined interval;
- removing the depilatory composition and depilated hair by moving a device as defined in claim 1 over the skin forming depilated skin; and
- rinsing the depilated skin.
11. (Previously presented) A pack comprising a device as claimed in claim 1 and a depilatory composition.
12. (Original) A pack as claimed in claim 11, wherein the depilatory composition is supplied in a bi-compartment aerosol canister.
13. (Cancelled)
14. (New) A device for removing a depilatory composition and entrained hair from skin, the device comprising a translucent, integrally molded thermoplastic unit, the unit consisting essentially of:
- a. a non-shaving head, the head comprising a planar surface comprising a flat top surface and a flat under surface, the planar surface ending in a single straight edge;
- b. a handle having a curvature profile and a broadened end distal from the head; and

c. a single joint between the handle and the head providing limited articulation of the head with respect to the handle.

15. (New) The device as claimed in claim 14, wherein in the limited articulation of the head there is a resistance force acting against articulation of the head, which resistance force increases as the articulation increases.

16. (New) The device of claim 14, wherein the joint is formed by a web of plastic material at the base of an upwardly open notch between the handle and a curved surface of the head.

17. (New) A method of removing a depilatory composition and entrained hair from the skin by use of the device of claim 14 comprising the steps of applying a depilatory to the skin needing such treatment, applying the device of claim 14 to skin and removing the composition.

18. (New) A pack comprising the device of claim 14 and a depilatory composition.

19. (New) A pack as claimed in claim 14, wherein the depilatory composition is supplied in a bi-compartment aerosol canister.
